

Dual Screen Wall-Mounted Gas Spring Monitor Arm

Maximize your view, reclaim your desk.

The Brateck LDA30-114 is a highly flexible, space-saving full-motion wall mount designed for small-to-medium monitors and TVs. Its articulating arm allows you to smoothly extend, swivel, and tilt your display without tools to achieve a comfortable, glare-free view. Complete with integrated cable management, it folds back close to the wall to keep your creative or professional workstation completely clean and organized.

Full-Motion Articulation

Built with a robust single-arm extension structure, this mount smoothly pulls out from the wall and swivels laterally to let you reposition your display effortlessly.

Integrated Cable Routing

Designed for versatile mounting on a variety of wall surfaces, allowing secure installation in offices, homes, workstations, and commercial environments.

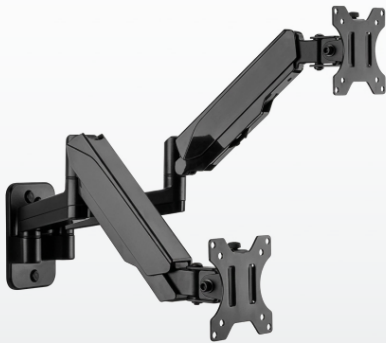

Multi-VESA Universal Fit

Equipped with a versatile universal interface pattern supporting common small-to-medium VESA standards (75x75mm and 100x100mm).

Smooth and Flexible Adjustment

Folds Flat Against the Wall for a Low-Profile Aesthetic

When not fully extended, the arm cleanly folds back into a highly compact profile. This keeps your monitor or small TV sitting close to the wall surface, maximizing free desk space and maintaining a tight, modern setup.

Features

360° Screen Rotation

Engineered with a smooth-turning VESA faceplate, this mount lets you rotate your screen a full 360 degrees. It enables you to switch from standard landscape orientation to a vertical portrait mode in seconds, making it ideal for review-heavy creative grids, coding, or reading long documents.

Slide-In Keyhole Plate

Setting up your screen is safe and straightforward thanks to an intuitive slide-in top VESA slot. Simply pre-install the upper screws onto the back of your monitor, hang it securely onto the wall bracket, and tighten the bottom hardware without struggling to hold up the display's weight.

Flexible Wall Installation

Designed for versatile mounting on a variety of wall surfaces, allowing secure installation in offices, homes, workstations, and commercial environments for optimal space utilization.

Premium Aluminum Build

Crafted from high-grade aluminum combined with durable plastic components, this chassis delivers exceptional strength without unnecessary bulk. The powder-coated finish ensures long-term wear resistance, keeping the articulating arms looking pristine while easily supporting dual screens.
